North Carolina A&T State University’s Quality Enhancement Plan (QEP) is Critical Thinking.

This will help our students be more competitive with graduates from other universities.

Help us get the word out!

Remember:

QEP = Critical Thinking

We teach students how to think, not what to think.

Teaching Critical Thinking

- Have students prepare via stimulating readings.
- Engage students in discussions in which students identify premises, evidence, and conclusions of arguments related to the major or discipline.
- Be deliberate and explicit about critical thinking.
- Make students self-aware.

Develop a Scholastic Culture

Critical thinking skills will improve in students if we all emphasize the importance of avid reading and critical writing... Staff and faculty should encourage excellence in students in every way.

- Discourage poor grammar.
- Encourage participation in critical thinking activities, such as research, data analysis, and debate in and out of class.
